Subject: Letter of Recommendation for WhaleTeq AECG100 Test System

Dear WhaleTeq partners,

I am writing this letter to recommend the WhaleTeq AECG100 Test System.

The AECG not only tests single-lead ECG but also outputs accurate PPG waveforms. It is the best reflective type PPG tester in the world we were able to find.

Both our R&D team and production line use the AECG100. The equipment is essential to our testing and is easy to use. In the product development phase, the AECG can send the ECG and PPG signals we need to validate our hardware performance and software system. On the production line, the AECG provides programmable test sequences so that we can run the testing quickly and efficiently.

Using WhaleTeq tools allows us to test efficiently and confidently.

We've had a great working relationship with WhaleTeq and hope to continue to see new test tools from WhaleTeq to help us succeed.

Sincerely,

Lauren Meleney  
Engineering Program Manager
