Subject: Letter of Recommendation for WhaleTeq CMRR2.0 Test System

Dear WhaleTeq partners,

I am writing this letter to recommend your CMRR2.0 Test System.

The CMRR2.0 test system is the only test system we could find to inject a customized electrical ECG waveform into our device. It is very easy to use, with high SNR, and durable. We have used it for many years to support multiple R&D product development and verification. We are very happy with it. Using WhaleTeq tools allows us to test with efficiency and confidence during development and production phase.

I also highly appreciate the technical support we received. Ms. Gina Lee and the engineering team are super knowledgeable and responsive.

We are happy to work with WhaleTeq and hope we continue to see new test tools from WhaleTeq to help us succeed.

Sincerely,

Sophia Shi
Director, V&V Team
